Gentle Skin[®] Superior OP[™]

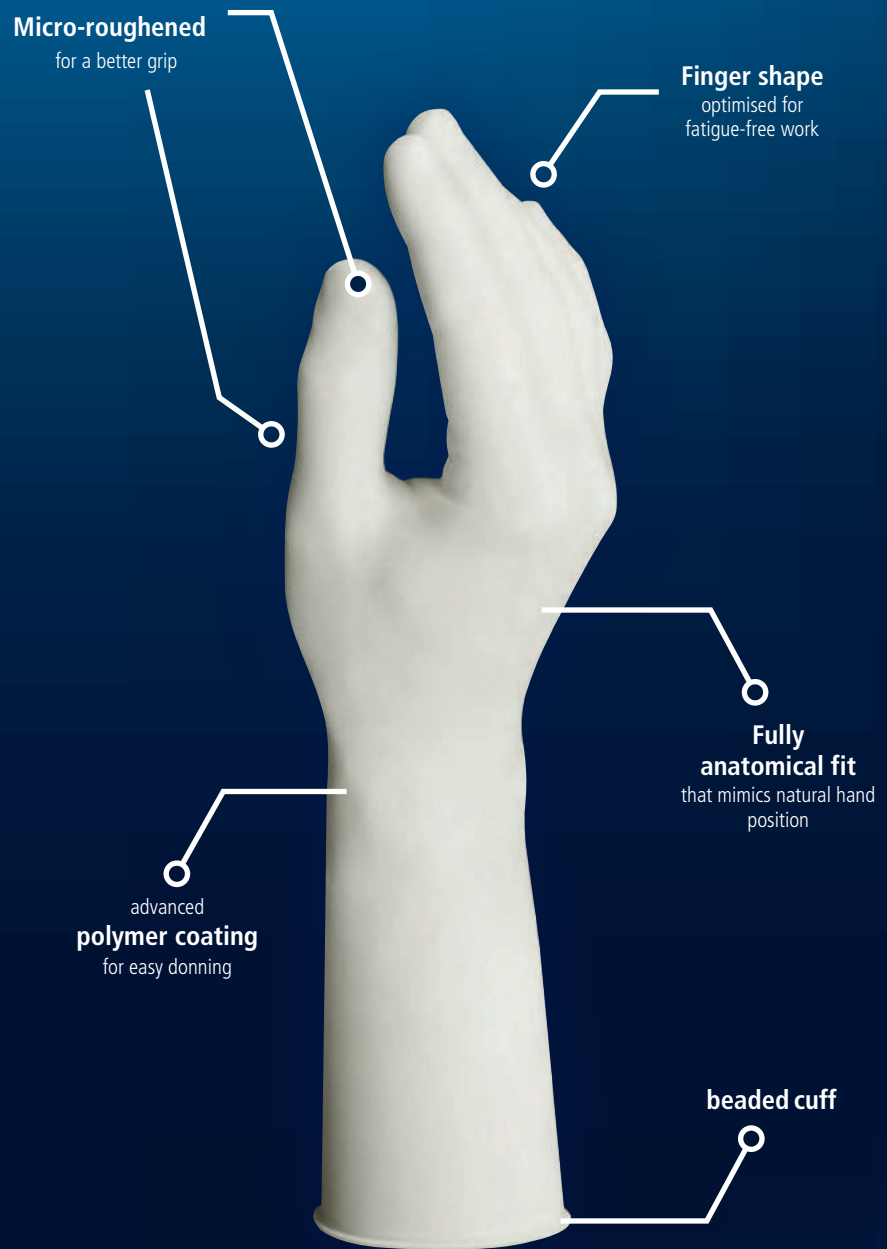

Application

The Gentle Skin® Superior OPTM is a powder-free surgical glove, free of synthetic latex, which provides good elasticity and tear strength.

Hand fatigue, especially during prolonged use, is reduced by mimicking the natural hand position. Due to the anatomical fit and the high elasticity, the Gentle Skin® Superior OPTM offers the user a good wearing comfort.

The polymer coating enhances usability by allowing easy donning and doffing.

The Gentle Skin® Superior OPTM is suitable for all surgical areas with sterile requirements and wherever the user is in a sterile environment and recognises a risk of contamination. Ideal for highly infectious situations in hospitals, with practising doctors, in laboratories or in the pharmaceutical industry.

Relevant Standards

- medical glove according to EN 455-1/-2/-3/-4
- protective glove according to EN ISO 374-1/-2/-4/-5
- Sterile product according to EN ISO 11137-2
